The Impacts of Collaborative Writing on EFL Students’ Paragraph Writing Performance

Thao Thu Thi Nguyen, Hoang Yen Phuong

Can Tho University, Vietnam

Abstract

In Vietnam, writing is considered the most challenging skill by English as a Foreign Language (EFL) students. These students encounter various kinds of problems in their writing process, from generating ideas to revising their tasks. Previous studies reveal that collaborative writing could bring students numerous benefits regarding their writing performance. The present study was conducted to examine the impacts of collaborative writing on EFL students’ paragraph writing performance and investigate their attitudes toward using collaborative writing in learning English writing. This research followed a mixed-method design, which lasted 15 weeks and was conducted with the participants of 80 EFL tenth-grade students in a high school context. Three research instruments namely the writing tests (pre- and post-test), questionnaires, and semi-structured interviews were employed in this study. The findings showed an improvement in EFL students’ paragraph writing performance after they had experienced collaborative writing. Moreover, the majority of EFL students also showed their highly positive attitudes towards using collaborative writing in learning English writing. Finally, the suggested pedagogical implications of using collaborative writing in learning English writing are hoped to contribute to the innovation of teaching writing in the context of high school in the Mekong Delta of Vietnam.

Keywords: paragraph writing, collaborative writing, EFL students’ attitudes

1. INTRODUCTION

English plays an essential role in almost all the fields in the age of globalization. In the context of Vietnam, English has become a necessary means of communication in the age of international integration, and it is also an important language for communication in Vietnam. For English subject at high schools, writing in general and paragraph writing in particular, is one of the most difficult skills. Students usually felt difficult when developing and organizing ideas, using correct grammar and word choices, and applying correct writing mechanics. Thus, the number of students successful in writing is too small. Within that context, collaborative writing can be applied to help EFL students improve their writing performance and inspire their motivation in learning English. Furthermore, collaborative writing (CW) has been embraced to generate and support knowledge co-construction in education; facilitates deep learning and a communication channel in pedagogy that stimulates learner autonomy, creativity, and critical thinking (Cliff Hodges, 2002; Lowry, Curtis, and Michelle René Lowry, 2004). While the findings of previous research have shed some light on the effects of CW (Kim, 2020; Letters & Examiners, 2016; Studies, International & Centre, 2015; Shehadeh, 2011), EFL students’ attitudes (Abahussain, 2020; Chen & Yu, 2019; Ismail & Lustyantie, 2020), little research has been conducted to investigate the impacts of CW on EFL students’ paragraph writing performance in Vietnam in common and in the Mekong Delta in particular. This is a gap that needs to be fulfilled.

The study was conducted to examine the impacts of collaborative writing on EFL students’ paragraph writing performance and investigate their attitudes toward using collaborative writing in learning English writing. In relation to the research aims, this present study attempted to answer two questions:

1. What are the impacts of collaborative writing on EFL students’ paragraph writing performance?
2. What are students’ attitudes toward using collaborative writing in learning English writing?
II. LITERATURE REVIEW

2.1. Paragraph writing performance

2.1.1. Writing

According to Sapkota (2013), writing has a function to present a language to convey some meaning so that the reader can grasp the information. Additionally, Weigle (2002) stated that there are several cognitive and meta-cognitive activities like brainstorming, planning, outlining, organizing, drafting, and revising involved in writing making it a complicated skill to master. According to Uusen (2006), writing is a skill that integrates knowledge and many sub-skills. Two aspects should be considered by the writers. First, the writing process relates to pre-writing, drafting, revising, editing, and publishing (Fachrurazy, 2011). Second, they have to accumulate micro and macro skills of writing, such as the ability to use word diction, grammar, and writing mechanics including the use of the capital letter, spelling, and punctuation (Brown & Lee, 2015). Taking all of the above viewpoints into account, writing is regarded as a complicated process that involves an individual's effort to convey and make sense of ideas to the target audience. As a result, writing is essential in English language teaching and learning.

2.1.2. Paragraph writing

Paragraph writing has been defined as a combination of sentences, intended to explain, illustrate, prove, apply some truth, or to give a history of events during any definite portion of time, relation to anyone subject of thought (Duncan, 2007. p.111). Ives et al. (2011) stated that a paragraph is much more than a collection of connected sentences. It is a building block of essay development, and paragraph provide the structure needed to develop the thesis of a paper. Indeed, a paragraph is a “mini-essay,” with its mini-thesis (the topic sentence), middle or body (the supporting details), and end or conclusion (the concluding sentence).

2.1.3. Writing performance

Writing performance is the demonstration of writing competence. Writing competence is a combination of knowledge making up effective writing. The knowledge can be seen as knowledge of content and context (the ability to fulfill the requirement of the task in terms of content in appropriate style and genres of using language), knowledge of language system (the ability of grammar and vocabulary), and knowledge of writing process (the ability to monitor the preparation for a writing task including outlining, drafting, revising and editing). As a result, to assess students’ writing performance, teachers should assess writing texts focusing on the content, organization, vocabulary, language use, and mechanics Jacobs (1981, cited in Shehadeh 2011a).

2.2. Collaborative writing

According to Brooks and Swain (2008), collaborative writing (CW) may be defined as the joint production or the coauthoring of a text by two or more writers. Additionally, CW is strongly supported by a substantial research base in cooperative learning, which can be defined as "students working together in a group small enough that everyone can participate on collective tasks without the direct and immediate supervision of the teacher" (Cohen, 1994). The value of CW as a means to develop the linguistic and writing conventions of a second language has also been underpinned from a socio cultural perspective (Storch, 2005). Collaborative writing is a way to foster reflective thinking, especially if the learners are engaged in the act of explaining and defending their ideas to their peers (Liang, 2010).

Storch (2011) summarized the benefits of CW as follows. First, it fosters the development of cognitive processes and learning. This means that through the practice of CW, students eventually become reflective thinkers who are more aware of the comprehension of their audience. Second, CW also fosters the process of producing language which includes lexical choices and grammatical forms. Al Ajmi and Ali (2014) further stated that CW is a means to develop second language students’ linguistic and writing conventions. In order to achieve a good written product, members must go through the social process in which they must interact, coordinate, and negotiate to reach the common goal (Dobao & Blum, 2013). Moreover, CW practice also increases students’ motivation, self-esteem, and a greater sense of responsibility; therefore, all these qualities foster students to be better writers (Mulligan & Garofalo, 2011).
Despite claimed benefit of CW, some argue that the concept of CW is unfair and penalize highly proficient achievers who prefer working individually. These high achiever have to waste their time with disagreement management and accept a lower quality of writing contribute by all or most team member (Storch, 2013). The disadvantages of CW are put into five categories namely stress, time management, target language proficiency, conflict with personal learning styles and opinions, and fairness issues. Stress occurs when there is a conflict within the team members and especially when it cannot be resolved. Time management problems of the individual can also affect team time management and often lead to conflicts of both opinions and personal learning styles. All these conflicts, consequently, can lead to unfair work contribution.

2.3. EFL students’ attitudes towards collaborative writing

Eagly and Chaiken (1993 cited in Schwarz and Bohner, 2001) stated that “an attitude is a psychological tendency that is expressed by evaluating a particular entity with some degree of favor or disfavor”. Similarly, Krech and Crutchfield (1948 cited in Schwarz and Bohner, 2001) wrote that “An attitude can be defined as an enduring organization of motivational, emotional, perceptual, and cognitive processes with respect to some aspect of the individual world” (p. 152).

Recently, there were a few studies carried out to explore attitudes on CW. Gokce (2001) fulfilled a study to test learners’ attitudes towards collaborative writing. The result indicated that negative attitude towards writing turned into positive ones after the collaborative writing. Hinkel (2011) conducted a study to investigate the students’ attitudes towards CW in teaching and learning. The result indicated that most students perceived collaborative writing as beneficial, as it allowed them to develop their communication skills as well as produce a final written text of higher quality in terms of local and global aspects. In the same line, Abdel and Farrah (2011) conducted a study to scrutinize students’ attitudes towards using collaborative writing. The results also reported that the students had positive attitudes towards collaborative learning. Alawaji (2020) implemented a study to investigate students’ attitudes related to collaborative writing. The findings suggested that most of the participants express positive attitudes toward collaborative writing and consider it beneficial for improving different aspects of writing skills, second language proficiency, and confidence.

III. METHODOLOGY

In order to examine the impacts of collaborative writing on EFL students’ paragraph writing performance and investigate their attitudes toward using collaborative writing in their learning English writing, a mixed-method design was employed in this study. According to Lichtman (2013), the mixed-method design is to combine both quantitative and qualitative methods in the study. In the first stage, a quasi-experimental design was used to measure the mean scores of EFL students’ paragraph writing performance before (pretest) and again after (posttest) they had experienced collaborative writing on their learning English writing. The writing tests were taken and adapted from “Thực hành Tiếng Anh 10”, by ThúyLiên-Thơ-BíchNg, 2016, NXB Giáo dục Việt Nam”. In the second stage, a descriptive study was designed with a questionnaire and semi-structured interviews to determine EFL students’ attitudes towards using collaborative writing in learning English writing and get a deeper understanding of whether collaborative writing helps EFL students improve their paragraph writing performance.

For the quantitative approach, the questionnaire was adopted and adapted from three main sources by Abdel & Farrah (2011), Albesher (2012), Coffin (2020), modified and developed by the researcher based on the theoretical frame work of attitudes constructed by Eagly and Chaiken (1998). The questionnaire was divided into two main sections. The first section was composed of questions asking for the participants’ background information related to their name and gender. The second section, focused on thirty-five items, aimed at gaining insights into students’ attitudes toward using collaborative writing on their English writing. All the items in this section were categorized into 5 clusters including EFL students’ enjoyment of writing activities using collaborative writing, the impacts of using collaborative writing in learning English writing, the challenges of using collaborative writing in learning English writing, EFL students’ learning outcomes of using collaborative writing in learning English writing and the future demands of using collaborative writing for learning to write English. To complement the qualitative data, six participants (3 with more improvement and 3 with less improvement) were invited to take part in semi-structured interviews based on their mean scores before and after treatment.
80 participants of Grade 10 from a high school where the researcher is teaching, participated in this study. The participants aged 16 and consisted of 37 (46.2%) males and 43 (53.8%) females. These participants were assumed to be similar in terms of proficiency and background knowledge. They were divided into two groups as an experimental group including 40 students and a control group 40.

All of the instruments were read and checked by the supervisor and then piloted to ensure the reliability. Thirty-five EFL students were chosen to participate in the pilot in the first week of the study. The reliability score of the questionnaire was $\alpha = .936$ indicated the high reliability for data collection. Simultaneously, the responses and opinions received from the pilot interview participants permitted for the clarification of the questions, the length of time spent in the process, and adjustments to the content and sequence in preparation for the actual interviews.

The data collected and analyzed by using the computer software Statistical Package for the Social Sciences (SPSS) version 20. The interview responses were recorded, transcribed, coded, and then translated into English. Analysis of the interviews was based on identifying the themes (Eagly and Chaiken, 1998) emerged through the interview process.

IV. FINDINGS

After analyzing the data from the writing tests, questionnaire, and interviews, an improvement of EFL students’ paragraph writing performance through using collaborative writing and EFL students’ high positive attitudes towards using collaborative writing in learning English writing were found.

4.1. Students’ paragraph writing performance

EFL students’ paragraph writing performance between the two groups before and after the intervention was analyzed by the Descriptive Statistic Test and Independent Sample T Test. Firstly, Descriptive Statistics Test was conducted to examine minimum score (Min), maximum score (Max), mean score (M) and standard deviation (SD) of pretest and posttest of the two groups. The results are demonstrated in Table 4.1 below.

<table>
<thead>
<tr>
<th>Writing tests</th>
<th>Groups</th>
<th>N</th>
<th>Min</th>
<th>Max</th>
<th>M</th>
<th>SD</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pretest</td>

<td>40</td>
<td>3.40</td>
<td>6.50</td>
<td>4.89</td>
<td>.72</td>
</tr>
<tr>
<td></td>
<td>Control</td>
<td>40</td>
<td>3.35</td>
<td>6.20</td>
<td>4.98</td>
<td>.79</td>
</tr>
<tr>
<td>Posttest</td>
<td>Experimental</td>
<td>40</td>
<td>4.35</td>
<td>8.45</td>
<td>6.17</td>
<td>.94</td>
</tr>
<tr>
<td></td>
<td>Control</td>
<td>40</td>
<td>3.65</td>
<td>6.70</td>
<td>5.34</td>
<td>.91</td>
</tr>
</tbody>
</table>

As can be seen in Table 4.1, the mean score of EFL students’ paragraph writing performance in the control group ($M=4.98$, $SD=.79$) was a little bit higher than the mean score of EFL students’ paragraph writing performance in the experimental group ($M=4.89$, $SD=.72$) before the intervention. Secondly, Independent Sample T Test was run to test whether there was a significant difference of EFL students’ paragraph writing performance in the pretest between the experimental group ($M=4.89$) and the control group ($M=4.98$). The result indicated that the difference of EFL students’ paragraph writing performance in the pretest between the two groups was not significant ($t=.550$, $df=78$, $p=.584$). This means that EFL students’ paragraph writing performance in the pretest of two groups was the same. The two groups were distributed homogenously before the intervention.

Moreover, Table 4.1 also revealed that EFL students’ paragraph writing performance between the two groups was different after the intervention. After eight weeks of the intervention, the mean score of EFL students’ paragraph writing performance in the experimental group ($M=6.17$, $SD=.94$) was higher than the mean score of EFL students’ paragraph writing performance in the control group ($M=5.34$, $SD=.91$). Independent Sample T Test was conducted to investigate whether there was a significant difference of EFL students’ paragraph writing performance in the posttest between the experimental group ($M=6.17$) and the control group ($M=5.34$). The result reported that the difference of EFL students’ paragraph writing performance in the posttest between the two groups was significant ($t=4.055$, $df=78$, $p=.00$). Hence, EFL students’ paragraph writing performance in the posttest of the two groups was different after the intervention. Figure 4.1 below presented the progress of both control group and experimental group.
Figure 4.1: EFL students’ paragraph writing performance before and after the study between the two groups

It can be clearly seen from figure 4.1 that EFL students’ paragraph writing performance before the study performed a noticeably small gap between experimental group \((M=4.89)\) and control group \((M=4.98)\) whereas after the study performed an improvement of EFL students’ paragraph writing performance between the two groups. It could not be denied that the posttest’s result of the experimental group \((M=6.17)\) was higher than the control one’s \((M=5.34)\). As a result, students learned better with the intervention. This inferred that a high improvement of EFL students’ paragraph writing performance through experiencing collaborative writing.

EFL students’ paragraph writing performance on the specific components within the two groups before and after the study was analyzed by the Descriptive Statistic Test and Paired-Sample T Test. First, Descriptive Statistics Test was run to test the mean score \((M)\) of pretest and posttest within the two groups. The results are demonstrated in Table 4.2 below.

<table>
<thead>
<tr>

<td>1.06</td>
<td>.33</td>
</tr>
</tbody>
</table>

Next, the paired – sample test was calculated to compare whether the mean score of the five specific components within experimental group and control group before and after the study are different. After intervention program, EFL students’ paragraph writing performance of the experimental group in terms of content, organization, vocabulary, language use and mechanics was statistically different from before the study \((t=5.14, p=.00; \ t=6.21, p=.00; \ t=6.05, p=.00; \ t=6.71, p=.00; \ t=6.64, p=.00)\). The results in Figure 4.2 indicated that EFL students improved their paragraph writing performance in terms of content, organization, vocabulary, language use and mechanics through using collaborative writing. It was also seen that EFL students made big progress in five specific components after the study, but language use saw minor improvement.
For the control group, the results indicated that EFL students’ paragraph writing performance in terms of content, organization, vocabulary, language use and mechanics was statistically different from before the study ($t=4.06, p=.00; t=4.61, p=.00; t=3.43, p=.00; t=2.48, p=.02; t=5.31, p=.00$). The results in Figure 4.3 indicated that EFL students also improved their paragraph writing performance in terms of content, organization, vocabulary, language use and mechanics. In summary, although EFL students’ paragraph writing performance in terms of five specific components after the study was higher than that before the study, only content saw big progress.

4.2. Students’ attitudes toward collaborative writing on their writing performance

4.2.1. EFL students’ enjoyment of writing activities using collaborative writing

A great number of EFL students showed their enjoyment of writing activities using collaborative writing. The finding was supported by both quantitative and qualitative data. The results of the first cluster of the questionnaire with 8 items were shown in Table 4.3 below.
Table 4.3: EFL students’ enjoyment of writing activities using collaborative writing.

</tbody>
</table>

*N=60; SD & D: Strongly disagree & Disagree; A & SA: Agree & Strongly agree

The results in Table 4.3 indicated that most of the participants positively responded to these items. Remarkably, most of participants (n=40) like working with their classmates in using collaborative writing (M=4.00), learning English writing through using collaborative writing (M=4.30), using collaborative writing to increase their interest in learning to write English(M=3.95) and practicing English writing using collaborative writing (M=4.15). It can clearly be seen on Item 2, 3, 5 and 8. However, only 2.5% of the participants did not like using collaborative writing in English writing activities (M=3.88), and learning writing skills through using collaborative writing (M=3.98) on the proof of Item 4 and 7. In addition, a small number of the participants showed their disagreement on Item 1, 6 “Collaborative writing activities are interesting” (10.0% disagree; M=3.88) and editing, proofreading their writing in a group (10.0% disagree; M=3.98). In brief, the results indicated the students showed very low disagreement on the activities in which collaborative writing was integrated into learning to write English.

The data from the interviews also supported these findings. Practicing paragraph English writing using collaborative writing is found helpful. Most of students like using collaborative writing to write paragraphs in English. They expressed that they enjoy using collaborative writing in the process of paragraph writing. EFL students also stated that collaborative writing is a very important and necessary activity. Especially, collaborative writing is one of the important activities in the English paragraph writing classes. The students reported,

*I like using collaborative writing to learn English paragraph writing because it is very helpful to me. (Student A)*
*I love using collaborative writing to write paragraphs in English. (Student B)*
*I quite like using collaborative writing to write paragraphs in English. (Student C)*
*I like using collaborative writing to learn paragraph English writing. (Student D)*
*I feel that I really enjoy using collaborative writing in the process of writing English paragraphs.(Student F)*

From what has been discussed, it could be seen that EFL students highly perceive their enjoyment of using collaborative writing in learning English writing.
4.2.2. The impacts of using collaborative writing in learning English writing

The quantitative data in conjunction with the qualitative data leaked that EFL students well perceived the positive impacts of using collaborative writing in learning English writing. The results of the second cluster of the questionnaire consisting of 11 items are shown in Table 4.4 below.

<table>

</tr>
</tbody>
</table>

* N=60; SD &D: Strongly disagree & Disagree; A & SA: Agree & Strongly agree

From the data in Table 4.4, more than 82.5% of the students believed that collaborative writing stimulates their critical thinking skill in English writing practices (M=4.13). They stated that practicing English writing using collaborative writing helps them develop their problem-solving skill (M=4.15), have a greater responsibility for themselves and the group (M=4.30), write my English paragraph effectively (M=4.05) and revise my writing effectively (M=4.28). Also, they believed that practicing English writing using collaborative writing has fostered the exchange of knowledge, information and experience (M=4.10). It can clearly be seen on Items 9, 10, 13, 15, 18 and 12. In Item 16 and 17, students showed that planning a topic with friends is much better than doing it individually as well as making an outline and writing down ideas with classmates are good methods in the pre-writing stage (M=4.30 and 4.25). The majority of the students believed that when practicing English writing using collaborative writing, they spend more time checking spelling, punctuation and grammar than doing it alone (67.5% agree; M=3.88) on the evidence of Item 19. Additionally, in Item 11, third-four of the students expressed that collaborative writing helps them receive useful feedback in learning English writing (M=3.98). Strikingly, in Item14, only 5.0% of the students did not consider that practicing English writing using collaborative writing enables them to help weaker members in the group (M=3.83). In summary, the results showed that EFL students well identified the positive impacts of using collaborative writing in learning to write English.

Additionally, these findings were strongly supported by interview data. The improvement in EFL students’ writing quality was found out. Most of students indicated that collaborative writing aids the development of rich ideas, more convincing factual evidence, and logical reasoning between concepts, and consistency in their paragraphs. The students expressed that they could share their ideas with friends and obtain many ideas from their friends to boost their writing better. Thus, EFL students have a chance to enhance their vocabulary and language use through using collaborative writing. They expressed,
Collaborative writing helps my paragraphs generate rich ideas, more convincible factual evidence and logical arguments between ideas, connections and consistency. (Student A)

After finishing paragraphs, they will be of higher quality than the traditional way we used to. (Student A)

I have more time to create my writings better and at the same time, I can also learn how to think about finding your ideas. (Student E)

Collaborative writing helps students understand how to use grammar and vocabulary in the most appropriate cases and helps students make English writing easier. (Student D)

In conclusion, from both quantitative and qualitative data, it could be seen that the positive impacts of using collaborative writing in learning English writing were well responded by EFL students.

4.2.3. The challenges of using collaborative writing in learning English writing

Both quantitative and qualitative data revealed the challenges of using collaborative writing in learning English writing. The results of the third cluster of the questionnaire with 4 items were shown in Table 4.5 below.

Table 4.5: The challenges of using collaborative writing in learning English writing

</tr>
</tbody>
</table>

* N=60; SD &D: Strongly disagree & Disagree; A & SA: Agree & Strongly agree

As presented in Table 4.5, Items 21 received the most positive responses, which indicated that there are conflicts with group members as using collaborative writing in learning English writing (80.0% agree; M= 4.00). Noticeably, only 1 out of 40 participants disagreed on Items 20 and 23 (2.5% disagree). The majority of the students perceived that using collaborative writing in learning English writing is a waste of time as they keep explaining things to others (72.5% agree; M=3.83). In conclusion, the results unveiled a large number of the students’ agreement on the challenges of using collaborative writing in learning English writing.

EFL students divulged that collaborative writing causes conflicts among friends. They also highlighted that collaborative writing leads to disagreements and arguments among group members, which affects the whole progress of the writings. They also stated that when collaborative writing, there will be a case of abdication of responsibility. They articulated,

Collaborative writing causes conflicts among friends. (Student A)
Collaborative writing can lead to arguments, which can cause disunity within the groups. This argument can take a long time to agree. (Student B)
When collaborative writing, there will be a case of abdication of responsibility. (Student F)

Altogether, it could be concluded that EFL students’ attitudes towards challenges of using collaborative writing were tested from both quantitative and qualitative data.
4.2.4. EFL students’ learning outcomes of using collaborative writing in learning English writing

The quantitative data disclosed EFL students’ attitudes towards their learning outcomes through using collaborative writing in learning English writing. The results of the fourth cluster with 8 items were shown in Table 4.6 below.

Table 4.6: EFL students’ learning outcomes of using collaborative writing in learning English writing

From the data in Table 4.6, more than 80.0% of the students believed that collaborative writing enhances their communication skills (Item 24, M=4.05), learn how to solve problems after using collaborative writing (Item 25, M=4.13) and learn how to work with others after using collaborative writing (Item 27, M=4.20). They stated that collaborative writing helps them get better scores in their paragraph writing exams (Item 30, M=3.95) and improve their paragraph writing performance (Item 28, M=4.08). Also, they believed that they feel more confident to work with other classmates after using collaborative writing (M=4.08) and help them to participate actively in the learning process (M=3.95). It can clearly be seen on Item 31 and 29. Strikingly, in Item 26, only 7.5% of the students did not learn how to manage conflicts after using collaborative writing (M= 3.83). In summary, the results showed that EFL students well identified their learning outcomes through using collaborative writing in learning English writing.

The results from the interviews showed that practicing English writing using collaborative writing aids EFL students not only improve their writing skills but also build up their confidence. EFL students expressed that thank to collaborative writing, they also achieve communication skills as they were able to share their ideas and communicate with their friends. EFL students enhance their critical thinking through learning new ways thinking from their friends. They reported,

- Collaborative writing trains us with confidence, communication skills, and improves our writing skills with the help of friends. (Student B)
- Collaborative writing helps students improve their writing skills. (Student D)
- Collaborative writing helps us develop critical thinking. (Student A)
- Collaborative writing increases teamwork ability. (Student F)

In brief, the finding from both quantitative and qualitative data pinpointed the proof of the improvement of EFL students’ learning outcomes through collaborative writing.
4.2.5. The future demands of using collaborative writing for learning to write English.

EFL students’ high expectations of using collaborative writing in learning to write English was explored from both questionnaire and interview data. The results of the fifth cluster with 4 items were displayed in Table 4.7.

</table>

* N=60; SD & D: Strongly disagree & Disagree; A & SA: Agree & Strongly agree

From the data in Table 4.7, 85% of the participants expected to study English writing using collaborative writing (M=4.18). Furthermore, they stated that collaborative writing should be encouraged and continued (77.5% agree, M=4.18). Also, they hoped they got the opportunities to use collaborative writing for English writing in the future (82.5% agree, M=4.08). On the contrary, only 5.0% of the students did not hope that collaborative writing will enable them to study English writing more efficiently (M=3.98). The results reported those EFL students’ high expectations of using collaborative writing in learning to write English.

The findings from the interviews support the results of the questionnaire that the participants hope that collaborative writing will be expanded and replicated not only in the English pilot classes but also in other ones to assist EFL students improve their English writing abilities and increase their affection among friends. Also, they would like to continue using collaborative writing for learning to write English in the future because they aspire to discuss with their friends and improve their writing skills. They expressed,

I hope that collaborative writing will be expanded and replicated not only in the pilot classes but also in all other classes. (Student A)
I hope that using collaborative writing will be used more widely in my learning processes because it has many benefits as I mentioned. (Student F)
To me, I would like to continue using collaborative writing in the future. (Student B)
I would like to continue using collaborative writing to learn English paragraph writing. (Student D)

All in all, EFL students’ high demands of practicing English writing through using collaborative writing in the future were found out from both quantitative and qualitative data.

V. DISCUSSION

From the results of the writing tests, questionnaire and interview data, it is underlined that collaborative writing can help EFL students improve their paragraph writing performance and students responded positively to the use of collaborative writing in learning English writing. The following section discusses the findings from this study in the relation to the research question.

Research question 1: What are the impacts of collaborative writing on EFL students’ paragraph writing performance?

The findings from the writing tests, it is underlined that collaborative writing can help EFL students improve their paragraph writing performance. This finding is in line with the results of the previous studies (Kim, 2020; Letters & Examiners, 2016; Studies, International & Centre, 2015; Shehadeh, 2011). These authors stated that collaborative writing engages students to enhance content generation and organization; enrich vocabulary and language use; upgrade mechanics and the development of second language proficiency to improve EFL students’ writing performance.
Research question 2: What are students' attitudes toward using collaborative writing in learning English writing?

With respect to EFL students' attitudes towards using collaborative writing in learning English writing, the questionnaire revealed that collaborative writing also helps EFL students achieve their knowledge co-construction, autonomy, creativity, communication skill, problem-solving skill and critical thinking. The findings are consistent with the results of previous studies (Cliff Hodges, 2002; Lowry, Curtis, and Michelle René Lowry, 2004; Shehadeh, 2011). In the same vein, EFL students believed that practicing English writing by using collaborative writing can make them interact, coordinate, and negotiate to reach the common goal. This is supported in the literature (Dobao & Blum, 2013). Moreover, collaborative writing practice also increases students’ motivation, self-esteem, and a greater sense of responsibility; therefore, all these qualities foster students to be better writers, which is mentioned in another study by Mulligan and Garofalo (2011).

Moreover, the findings from the interview showed that EFL students' high positive attitudes towards using collaborative writing in learning English writing were found. EFL students stated that they find collaborative writing beneficial for improving different aspects of writing skills, second language proficiency, and communication skills and confidence. The findings are proposed in the literature (Alawaji, 2020; Hinkel, 2011; Shehadeh, 2011). Moreover, the students reported that collaborative writing makes learning English writing more helpful and creative for improving writing, providing the opportunity to pool ideas, having positive emotional and social effects as well as creating a pleasant learning classroom atmosphere. These findings also parallel with the results of the prior studies (Abahussain, 2020; Chen & Yu, 2019; Ismail & Lustiantie, 2020).

Altogether, it could be concluded that after EFL students had experienced collaborative writing for learning to write English, an improvement in EFL students’ paragraph English writing and positive view points towards using collaborative writing in learning English writing were scrutinized.

VI. CONCLUSION

The present study was conducted to examine the impacts of collaborative writing on EFL students’ paragraph writing performance and investigate their attitudes towards using collaborative writing in learning English writing. The findings from the writing tests first showed an improvement in EFL students’ paragraph writing performance after they had experienced collaborative writing. Regarding EFL students’ attitudes, the data from the questionnaire and interviews revealed that EFL students hold high positive attitudes towards using collaborative writing in learning English writing. In light of these findings, some pedagogical implications are drawn.

For teachers, the understanding of the impacts of collaborative writing on students’ paragraph writing performance will assist teachers have a better view of using collaborative writing to teach English writing, make the right decisions on applying the teaching methods in the writing classroom, improve their writing programs and employ effective teaching strategies to further support their students’ paragraph writing development. Therefore, EFL teachers should be aware of the supportive conditions that are necessary so that students can practice writing more effectively. In other words, teachers should give students maximum opportunities to practice English writing. One of the effective ways to do this is that should introduce collaborative writing into the classrooms for the students to have more English writing practice and experience English writing learning in a friendly environment, which increases the students’ intrinsic motivation to learn English writing.

For students, this research is hoped to help them find out an effective strategy to improve their paragraph writing performance and inspire their motivation in learning English writing. Indeed, the findings of the present study showed EFL students’ self-reliance and enjoyment when practicing writing English using collaborative writing. It is recommended that the students who have low English skills, shyness, and the lack of confidence should attend the classes in which collaborative writing is used to enhance their writing performance. It is suggested that collaborative writing should be used to practice English writing by the students since the use of collaborative writing can promote the students’ confidence and communication skills.
About the Authors
Thao Thu Thi Nguyen is currently an MA student at Can Tho University, Vietnam. Her research interests include writing skills and strategies, and teaching methodology. She is also keen on improving the learning experience and applying innovative approaches for EFL students.

Hoang Yen Phuongs is currently an Associate Professor at the School of Foreign Languages, Can Tho University, Vietnam. She carries studies on language teaching approaches, students’ learning autonomy, self-regulated learning strategies and teachers’ professional development. She published articles in different journals and is the editor of one book on formative assessment in language teaching.
